

Soothing Heart™

Vibrating Pillow

New Discovery!

Does your baby have trouble sleeping? Often times, babies have a difficult time calming down and relaxing when it's time to sleep. With the Soothing Heart,™ you can help your little one get some rest! It is a vibrating pillow that simulates a heart beat to calm and soothe your baby. Just press the heart to activate it, and it shuts off automatically after twenty minutes!

How is it made?

Through countless hours of design strategy implementation, we have accomplished our goal: a cost effective, easy to manufacture product. It is an injection molded heart with heartbeat vibrations in a cut and sewn cotton cover. A prototype product sample has been built and Pro E technical drawings are available.
